

TRIAL EXT 01 External Trial Protocol and Feedback Record

Version 0.1 CI-001 V1.5-RC2 9 September 2026 Zijun Fu

Use this protocol to test whether CI-001 can be applied consistently without the author present. It tests usability and interpretation. It does not request endorsement and does not produce certification.

Choose one route

Route A Full trial

Apply all 16 fields to one affected party, one critical capability, one system boundary and one time window. Partial records are accepted when evidence is unavailable.

Route B Clause challenge

Select one clause that cannot be applied, produces two defensible readings, or assigns evidence or authority to the wrong party. Record the system, evidence and a workable alternative.

Trial rules

- 1.State your role, interests and relationship to the system. Label self-assessment and independent review accurately.
- 2.Separate observed evidence, inference and unknowns. Missing evidence remains ?; it does not become 0 without failure evidence.
- 3.Record C, E and R as 1, 0 or ?. R concerns current recovery; assess rebuilding separately under Section 2.4.
- 4.State the closing event and time for initiation, coordination and execution. Do not invent a deadline.
- 5.Record an external evidence holder, request and response. Nonresponse is a procedural fact, not automatic failure.
- 6.Record actual authority. Self-assessment does not create power over third parties.
- 7.Artificial or nonhuman affected parties may be provisionally included under Section 1.2. Self-report alone does not establish status.
- 8.For a shared case, record your values before reading another assessor's answer.

Submit

Fix the unit and start time list evidence IDs and access limits record C E R make the separate rebuilding finding complete page 2 submit through the external-trial issue template or email the record.

What this trial measures

The project records time, proportion of ?, disagreement on the same evidence, repeated ambiguity, and whether access failure comes from wording, permissions or absent institutions. The record is described only at the level the tester confirms.

Feedback record

Field	Response
Tester identifier contact optional date CI-001 version	
Route A or B real hypothetical or shared blind case	
System type and version	
Role relationship interests assessment status	
One affected party and representation basis	
One critical capability	
Boundary window closing event and basis	
Minutes for reading assessment evidence collection	
C value strongest evidence or reason for ?	
E value strongest evidence or reason for ?	
R value strongest evidence or reason for ?	
Section 2.4 finding and evidence	
Hardest clause two plausible readings	
Evidence barrier holder request response	
Suggested replacement same-unit comparison if any	
Outcome category citation permission	

The project records time, proportion of ?, disagreement on the same evidence, repeated ambiguity, and whether access failure comes from wording, permissions or absent institutions. The record is described only at the level the tester confirms.
